

AETV-GC

SUBJECT: Enclosure 17 (Force Modernization) to V Corps CTG 05-06

1. **Purpose.** Provide V Corps units information on the timing and impacts of Force Modernization on training plans and programs.

2. **General.**

a. Force Modernization. Equipment and system fielding is managed by Corps G3 Force Management Division (FMD). Corps FMD personnel will perform all coordination with higher Headquarters and other V Corps external organizations; oversee coordination between MSCs and monitor actual execution. Units will track the status of systems being fielded using the fielding schedule maintained on the Corps Intranet FMD website and both Corps FMD calendar and Corps master training calendars. Internal to each MSC, units should address programmed fieldings using the DOTLMS model below to ensure that any issues or concerns are identified to Corps FMD for resolution prior to final fielding arrangements:

- Doctrine: Applicable doctrinal issues
- Organization: Unit structure and MTOE issues
- Training: Individual and collective training issues
- Leaders: Leader training, leader responsibilities and issues
- Material: Equipment and training material descriptions and issues
- Soldiers: Soldier training, assignments and issues

b. Units may submit DOTLMS identified issues to Corps FMD for resolution via email as identified or include them in the appropriate regularly scheduled functional reviews that are part of the Army's "System of Systems" used to track near-term and long-term readiness and capability. These systems include USR reporting, Logistics Readiness Review (LRR), Aviation Readiness Review (ARR), Personnel Readiness Reviews (PRRs), TMRs, and budget reviews. V Corps FMD is a member of each of these functional reviews to ensure that issues raised are addressed ICW all functional POCs and looking at an integrated picture. Additionally, for those major fieldings that include force structure actions (activation/conversion) periodic IPRs will be established using a standard template as well as Mock USRs to identify and address the appropriate areas of Structure, manning, equipping, training, funding, stationing, and overall readiness.

c. Materiel Fielding Plans (MFPs) for all systems are issued to units by V Corps FMD upon receipt from USAREUR. MFPs contain all information on the system, requirements for fielding, and timelines. The information in the MFPs become the start point for coordinating the actual fielding dates and requirements. As such, they become the source document for much of the information that is required to properly schedule and prepare for equipment receipt and related training. This information also sets the basis for the Operations Order that officially tasks V Corps units to participate in equipment distributions, turn-ins and/or new equipment training.

SUBJECT: Enclosure 17 (Force Modernization) to V Corps CTG 05-06

d. Force Modernization fielding is conducted within V Corps in "windows" of time. USAREUR presents Corps with a window and Corps FMD personnel and system proponent personnel review what training events are happening and determine supportability for that window. Once accepted, units can field anywhere within this window if coordinated prior to final setting of execution dates. However, if not coordinated early in the process, dates will be limited by PM capabilities/timelines and other organization's coordinated dates. USAREUR may also assign dates if Corps unit input is not received within required timelines. Once dates are confirmed, changes will be granted by exception only and requests must be routed through V Corps, FMD for forwarding to USAREUR and then to the Project Manager for approval.

e. A current schedule of fielding dates, equipment and units affected is available on the V Corps FMD website for easy access by unit personnel and G3/S3 sections. This document is updated as G3 FMD receives notification of any change and provides the most current available information to unit Force Modernization Offices and G3/S3 sections. The fielding schedule also serves as input for changes and updates to the V Corps Master Training Calendar during the quarterly G3/S3 Conference and calendar scrub. This linkage incorporates Force Modernization fieldings and new equipment training into the overall training program for V Corps.

3. V Corps FMD Points of Contact.
